

Clinician Should Inform, Patient Should Know!
There is a New Treatment Option to Improve Functional Vision!

Dear Doctor,

We are pleased to share that in 2025, **RevitalVision** demonstrated efficacy and safety in **seven randomized controlled clinical studies**, three of which were published in leading peer-reviewed ophthalmology journals.

The peer-reviewed publications include:

- **American Journal of Ophthalmology (AJO)**
[*Vision Improvement in **Keratoconus** Patients Trained with Perceptual Learning: A Randomized Controlled Trial*](#)
- **Latin American Journal of Ophthalmology (LAJO)**
[*Long-term efficacy of perceptual learning therapy in **Amblyopia**: A 5-year follow-up study*](#)
- **British Journal of Ophthalmology (BJO)**
[*Efficacy of Perceptual Learning among Patients with **Infantile Nystagmus**: A Prospective Single-blind Randomized Controlled Trial*](#)

Three additional studies won **best scientific paper award at the 2025 ASCRS annual meeting**:

- [*Cortical Stimulation in **Dissatisfied MF-IOL** Patients – RCT Results*](#)
- [*Visual Perceptual Learning in **Stable Keratoconus** Patients – Preliminary Results*](#)
- [*Patient-Specific Visual Stimulation in **Crosslinked Keratoconus***](#)

Last but not least - the **Sport Vision Study**:

- [*Efficacy of RevitalVision in enhancing habitual **vision in elite athletes** from the Standard Liege football club, aged 17–34 years.*](#)

These studies demonstrate **significant, measurable, and lasting improvements in visual function** across diverse indications, further reinforcing the consistency and robustness of the clinical evidence supporting RevitalVision' technology.

RevitalVision is a prescribed, home-based perceptual-learning software program, that improves vision by visually stimulating the brain's visual cortex.

We encourage you to **share this new treatment option with your patients** and consider how it may complement your current clinical care.

Yair Yahav,
CEO, RevitalVision
